

# Educational Question-Answer Forum

Software Project Lab-3

7/11/2019

Submitted by

Tulshi Chandra Das-811

Supervised by

Md. Saeed Siddik

Assistant Professor, IIT, DU

## **EDUCATIONAL QUESTION-ANSWER FORUM**

### **SUBMITTED TO**

SPL3 Committee

Institute of Information Technology

University of Dhaka

### **SUBMITTED BY**

Tulshi Chandra Das

BSSE0811

## **LETTER OF TRANSMITTAL**

7 November 2019

The Coordinators, SPL3

Institute of Information Technology

University of Dhaka.

**Subject: Submission of term report on “Educational Question Answer Forum”**

Sir

I have prepared the report on my project “**Educational Question Answer Forum**”. This report includes the details of each steps I followed to collect the requirements.

The primary purpose of this report is to summarize my findings from the work that I completed.

Sincerely yours

Tulshi Chandra Das- BSSE0811

8th Semester, 8th Batch

Institute of Information Technology

University of Dhaka

## **LETTER OF ENDORSEMENT**

November 7, 2019

To Whom It May Concern

**Subject:** Approval of the report

This letter is to clarify that all the information mentioned in this document is true. The project mentioned here have had successful involvement of Tulshi Chandra Das, BSSE 0811 from Institute of Information Technology, University of Dhaka.

I wish him all the best and hope that he will lead a successful career.

**Project Supervisor**

Md. Saeed Siddik

Assistant Professor

Institute of Information Technology

University of Dhaka

## **ACKNOWLEDGEMENT**

I am highly indebted for getting such a tremendous opportunity to prepare the report on Question Answer Forum for Bangladesh. I would like to thank my Supervisor, Md. Saeed Siddik, Assistant Professor, Institute of Information Technology, University of Dhaka, whole-heartedly, for giving me guidelines about how I can prepare this report and the coordinators of this course for giving guideline me. In completing this paper, I have collected data from some students and instructors of the university and college. I am thankful to all for the works cited.

## **ABSTRACT**

The study is made for Educational Question Answer Forum. The scope of the study is to analyze on Question Answer Forum for Bangladesh and implement a web application. The object of this documentation is to describe the requirements and show user manuals of implemented features of the application.

## **CHAPTER-01: INTRODUCTION**

This chapter is a part of my software requirement specification for the project “Question Answer Forum for Bangladesh”. In this chapter, I focus on the intended audience for this project.

### **1.1 PURPOSE**

This document briefly describes the Software Requirement Analysis of Question Answer Forum for Bangladesh. It can be considered the précised version of the SRS document. The requirements contained in the SRS are independent, uniquely numbered and organized by topic. The SRS serves as an official means of communicating user requirements to the developer and provides a common reference point for both the developer team and the stakeholder community. The SRS will evolve over time as users and developers work together to validate, clarify and expand its contents.

### **1.2 INTENDED AUDIENCE**

This SRS is intended for several audiences including the customers as well as the project designers, developers. The customer will use this SRS to verify that the developer team has created a product that the customer finds acceptable. The designers will use this SRS as a basis for creating the system’s design. The designers will continually refer back to this SRS to ensure that the system they are designing will fulfill the customer’s demands. The developers will use this SRS as a basis for developing the system’s functionality. The developers will link the requirements defined in this SRS to the software they create to ensure that they have created a software that will fulfill all of the customer’s documented requirements. When portions of the software are complete, the developer will run their tests on that software to ensure that the software fulfills the requirements documented in this SRS. The testers will again run their tests on the entire system when it is complete and ensure that all requirements documented in this SRS have been fulfilled.

## **1.3 CONCLUSION**

This analysis of the audience helped me to focus on the users who will be using my analysis. This overall document will help each and every person related to this project to have a better idea about the project.

## **CHAPTER-02: INCEPTION**

### **2.1 INTRODUCTION**

Inception is the beginning phase of requirements engineering. It defines how a software project gets started and what the scope and nature of the problem to be solved are. The goal of the inception phase is to identify concurrent needs and conflicting requirements among the stakeholders of a software project. At project inception, I establish a basic understanding of the problem, the people who want a solution, the nature of the solution that is desired and the effectiveness of preliminary communication and collaborations between the other stakeholders and the software team.

To establish the groundwork, I have worked with the following factors related to the inception phases:

- List of stakeholders
- Recognizing multiple viewpoints
- Working towards collaboration
- Requirements questionnaire

#### **2.1.1 LIST OF STAKEHOLDERS**

According to Sommerville and Sawyer [Som97], “Anyone who benefits in a direct or indirect way from the system which is being developed is a stakeholder.” This implies that stakeholders include the end users of the developed software as well as the people whose activities might be influenced by the tool. Towards the end of inception, the list of stakeholders is usually larger as every stakeholder is allowed to suggest one or more individuals who might be probable stakeholders for the given problem.

To identify stakeholders, I consulted some teachers and students of some universities of Bangladesh and asked them the following questions:

I identified following stakeholders for my Educational Question Answer Forum:

- Inquirer
- Responder

**Inquirer:** Inquirer is a person who ask question to this forum.

**Responder:** Responder is a person who answer to a question

## 2.1.2 MULTIPLE VIEWPOINTS

Different stakeholders achieve different benefits from the system. Consequently, each of them has a different view of the system. So, I have to recognize the requirements from multiple points of view, as well as multiple views of requirements. Assumptions are given below:

### USER VIEWPOINTS

- Creating Question
- Answer to question
- Voting/Downvoting to question/answer
- Comment System
- Profile view
- Search user
- Rating system

## 2.1.3 WORKING TOWARDS COLLABORATION

Each of the stakeholder constituencies (and non-stakeholder constituency) contributes to the requirement engineering process. The greater the numbers of interactions with multiple stakeholders, the higher is the probability of inconsistency, conflicts, and clashes of viewpoints. In such circumstances, requirement engineers finalize the requirements following some steps, which are listed below.

- Find the common and conflicting requirements
- Categorize them
- List the requirements based on stakeholder's priority
- Make a final decision about requirements

### COMMON REQUIREMENTS

- Creating Question: Users can create a question to this forum.

- Answering to question: Users can answer to a question
- Commenting to question: Users can comment to questions and answers.
- Rating system: Users can upvote or downvote to question/answer
- Question recommendation: After log in user can view the recommended question for him/her.
- Suggesting similar questions: When user will ask question he/she will view the questions similar to the asking question.

## **CONFLICTING REQUIREMENTS**

- Profile view: A user can view profile of other users

## **FINAL REQUIREMENTS**

- Creating Question
- Answer to question
- Voting/Downvoting to question/answer
- Comment System
- Profile view
- Question recommendation
- Suggesting similar questions
- Search user

## **2.2 CONCLUSION**

The Inception phase helped me to establish a basic understanding about the Educational Question Answer Forum, identify the stakeholders who will be benefited if this system becomes automated, define the nature of the system and the tasks done by the system, and establish a preliminary communication with my stakeholders.

## **CHAPTER-03: ELICITATION**

After discussing on the inception phase, I need to focus on Elicitation phase. So, this chapter specifies the Elicitation phase.

### **3.1 INTRODUCTION**

Requirements Elicitation is a part of requirements engineering that is the practice of gathering requirements from the users, customers, and other stakeholders. I have faced many difficulties, like understanding the problems, making questions for the stakeholders, problems of scope and volatility. Though it is not easy to gather requirements within a very short time, I have surpassed these problems in an organized and systematic manner.

### **3.2 ELICITING REQUIREMENTS**

I have seen Question and Answer (Q&A) approach in the previous chapter, where the inception phase of requirement engineering has been described. Requirements Elicitation (also called requirements gathering) combines problem solving, elaboration, negotiation and specification. The collaborative working approach of the stakeholders is required to elicit the requirements. I have finished the following tasks for eliciting requirements-

- Collaborative requirements gathering
- Quality function deployment
- Usage scenario
- Elicitation work products

#### **3.2.1 COLLABORATIVE REQUIREMENTS GATHERING**

I have met with stakeholders in the inception phase. The stakeholders are Inquirer and Responder. Many different approaches to collaborative requirements gathering have been proposed by the stakeholders. To solve this problem, I have met with the stakeholders again to elicit the requirements. A slightly different scenario from these approaches has been found.

### 3.2.2 PROBLEM IN THE SCOPE

A number of the problems were encountered in the course of preparing the software requirement specification and analysis of the Question-Answer Forum.

#### **What will not be done:**

- In the forum user cannot upload any document file (docx, pdf etc.)
- The forum is only for educational purpose not other.

#### **What will be done:**

- In this forum image can be uploaded
- User can give answer of maximum 5000 character.

### 3.2.3 QUALITY FUNCTION DEPLOYMENT

Quality Function Deployment (QFD) is a technique that translates the needs of the customer into technical requirements for software. It concentrates on maximizing customer satisfaction from the software engineering process. So, I have followed this methodology to identify the requirements for the project. The requirements, which are given below, are identified successfully by the QFD.

#### 3.2.3.1 NORMAL REQUIREMENTS

Normal requirements are generally the objectives and goals that are stated for a product or system during meetings with the stakeholders. The presence of these requirements fulfills stakeholders' satisfaction. The normal requirements of my project-

- Answering to question
- Creating a question
- Commenting to answer or a question
- Upvote/Downvote to question/answer

#### 3.2.3.2 EXPECTED REQUIREMENTS

- Question/Answer modification deletion

- User-friendly
- Efficient question recommendation system
- Efficient question similarity check

### **3.2.3.3 EXCITING REQUIREMENTS**

- Badge popularity system in user rating

### **3.2.4 USAGE SCENARIO**

Question-Answer Forum for Bangladesh is an automated system for the following purposes:

- Question
- Answer
- Comment management
- User management

#### **3.2.4.1 QUESTION MANAGEMENT**

##### **QUESTION MANAGEMENT**

User will create a question going through a set of defined steps. First user will provide the category of his/her question. Then user will give the title of the question. Then he/she will provide the tags related to the topics of question. In the next step the system will show some similar question related to his asking question. If user not satisfied user will go to next step and give description and can upload image. At last user will submit question. To submit user must have to be signed. If he/she is new user he/she signup using OAuth authentication system.

##### **RECOMMENDING QUESTION TO USERS**

In this forum different user from different will create question on different study topics. So, all user will not be recommended to all types of question. The system will use user profile data and activity to recommend questions.

### **3.2.4.2 ANSWER MANAGEMENT**

Any user can answer to any question. User can upload image with his/her answer. User will be able to write maximum 5000-character description to an answer.

### **3.2.4.3 COMMENT MANAGEMENT**

Any user can comment to an answer/question. The question or answer is considered the comment source. User will have to gain minimum 50 reputation to comment. Any user can upvote/downvote to a comment. Any user can mark the comment as usable or as problematic. If the negative rating crosses the limit of 50 then comment will be blocked. User reputation also increase/decrease based on user reaction.

### **3.2.4.4 USER MANAGEMENT**

Managing user and proofing their activity is one of the major parts of this project. This system will store the activities like answers, question, popularity, following tags, answer count to corresponding to tags, question count corresponding to tags. Popularity is the exciting thing for users to be motivated active in question-answer discussion. User will gain more popularity based on upvote to his/her question or answer or comment. He/she will gain different badge (silver, gold, platinum) at different level of popularity. For each event or user will get notification status. As a result, user will appear in the search of users more in front position. User will use the online authentication system to be authenticated(auth0). User will be identified by a unique id.

## **3.2.5 ELICITATION WORK PRODUCT**

At first, I have to know whether the output of the Elicitation task may vary because of the dependency on the size of the system or the product to be built. Here, the Elicitation work product includes:

- Making a statement of my requirements for the Educational Question Answer Forum.
- Making a bounded statement of scope for my system.

- Making a list of users and other stakeholders who participated in the requirements elicitation.
- A set of usage scenarios that provide insight into the use of the system.
- Description of the system's technical environment

## **CHAPTER-04: SCENARIO BASED MODELING**

This chapter describes the Scenario-Based Model for the project.

### **4.1 INTRODUCTION**

Although the success of a computer-based system or product is measured in many ways, user satisfaction resides at the top of the list. If I understand how end users (and other actors) want to interact with a system, my software team will be better able to properly characterize requirements and build meaningful analysis and design models. Hence, requirements modeling begins with the creation of scenarios in the form of Use Cases, activity diagrams.

### **4.2 DEFINITION OF USE CASE**

A Use Case captures a contract that describes the system behavior under various conditions as the system responds to a request from one of its stakeholders. In essence, a Use Case tells a stylized story about how an end user interacts with the system under a specific set of circumstances. A Use Case diagram simply describes a story using corresponding actors who perform important roles in the story and makes the story understandable for the users. The first step in writing a Use Case is to define that set of “actors” that will be involved in the story. Actors are the different people that use the system or product within the context of the function and behavior that is to be described. Actors represent the roles that people play as the system operators. Every user has one or more goals when using the system.

#### **PRIMARY ACTOR**

Primary actors interact directly to achieve required system function and derive the intended benefit from the system. They work directly and frequently with the software.

#### **SECONDARY ACTOR**

Secondary actors support the system so that primary actors can do their work. They either produce or consume information.

## 4.3 USE CASE DIAGRAM

Use case diagrams give the non-technical view of the overall system.

### 4.3.1 LEVEL- 0 USE CASE DIAGRAM-EQAF(EDUCATIONAL QUESTION-ANSWER FORUM)

*Figure 1: level 0 use case diagram- EQAF*

Name: Educational Question-Answer Forum

Primary actor: Inquirer, Responder

Secondary actor: N/A

### DESCRIPTION OF USE CASE DIAGRAM LEVEL-0

After analyzing user story, I found five actors who will directly use the system as a system operator. Primary actors are those who will play action and get a reply from the system whereas secondary actors only produce or consume the information.

Following the actors of “Educational Question-Answer Forum”:

- Inquirer
- Responder

### 4.3.2 LEVEL -1 USECASE DIAGRAM-SUBSYSTEM OF EQAF

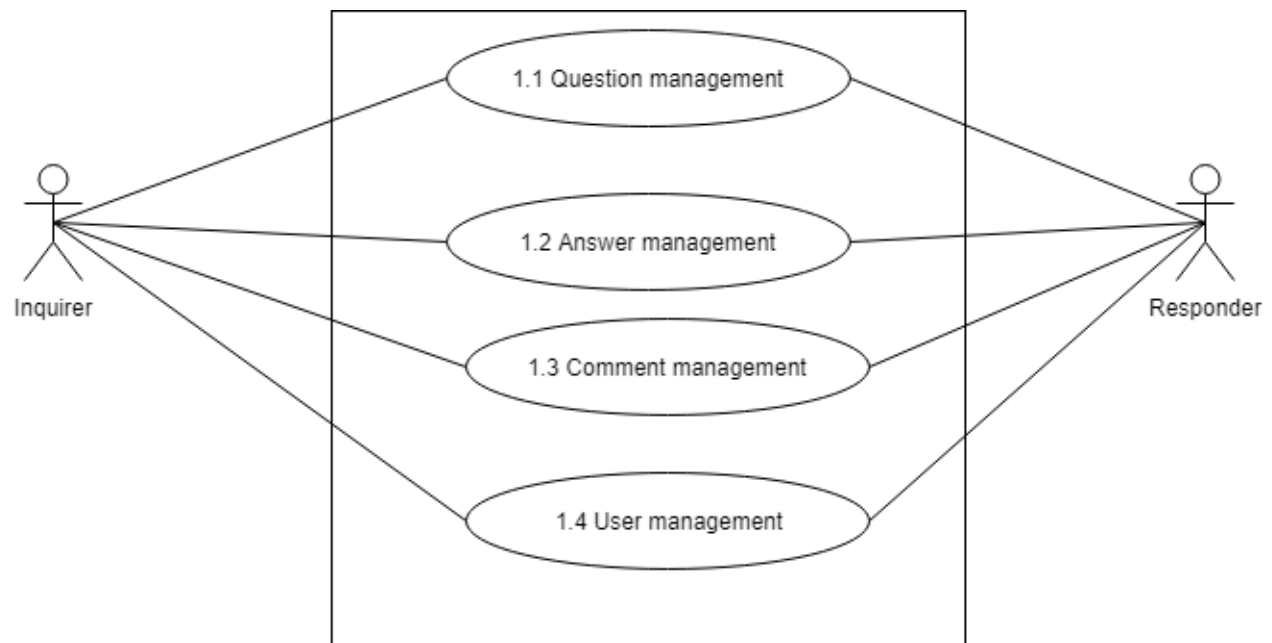

Figure-2: Figure 2level 1 use case diagram - Subsystem

Name: Subsystem of EQAF

Primary actor: Inquirer, Responder

Secondary actor: N/A

There are 4 subsystems in the Educational Question Answer Forum. They are-

- Question Management
- Answer Management
- Comment Management
- User Management

### 4.3.3 LEVEL- 1.1 USE CASE DIAGRAM- QUESTION MANAGEMENT

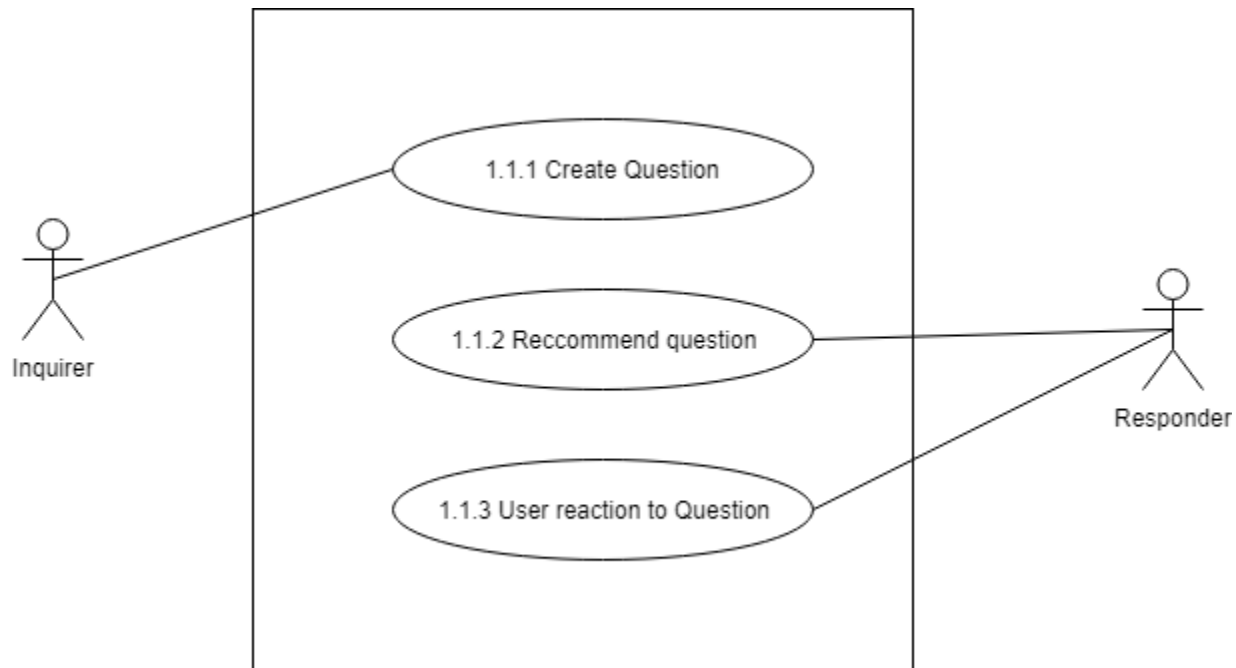

Figure-3: Figure 3level 1.1 use case diagram – Question management

Name: Question management

Primary actor: Inquirer, Responder

Secondary actor: N/A

#### DESCRIPTION OF LEVEL- 1.1 USE CASE DIAGRAM-

Creating question refers the process of creating question. User will create a question following some defined steps. After creating question system will recommend the asked question to appropriate user. Users can react by giving upvote or downvote to the question. If downvote count cross a specific limit question will be blocked. The subsystems are:

- Create question
- Recommend question
- User reaction to question

#### 4.3.4 LEVEL -1.2 USE CASE DIAGRAM- ANSWER MANAGEMENT

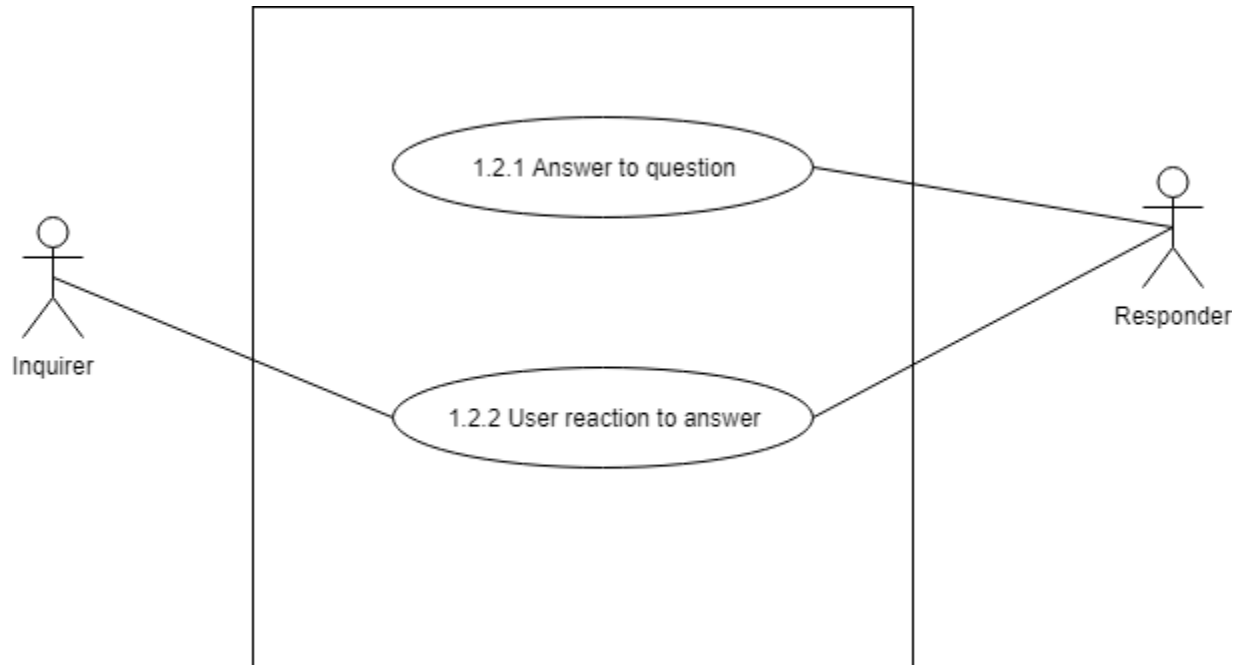

Figure 4: level 1.2 use case diagram- Answer management

Name: Answer management of EQAF

Primary actor: Responder, Inquirer

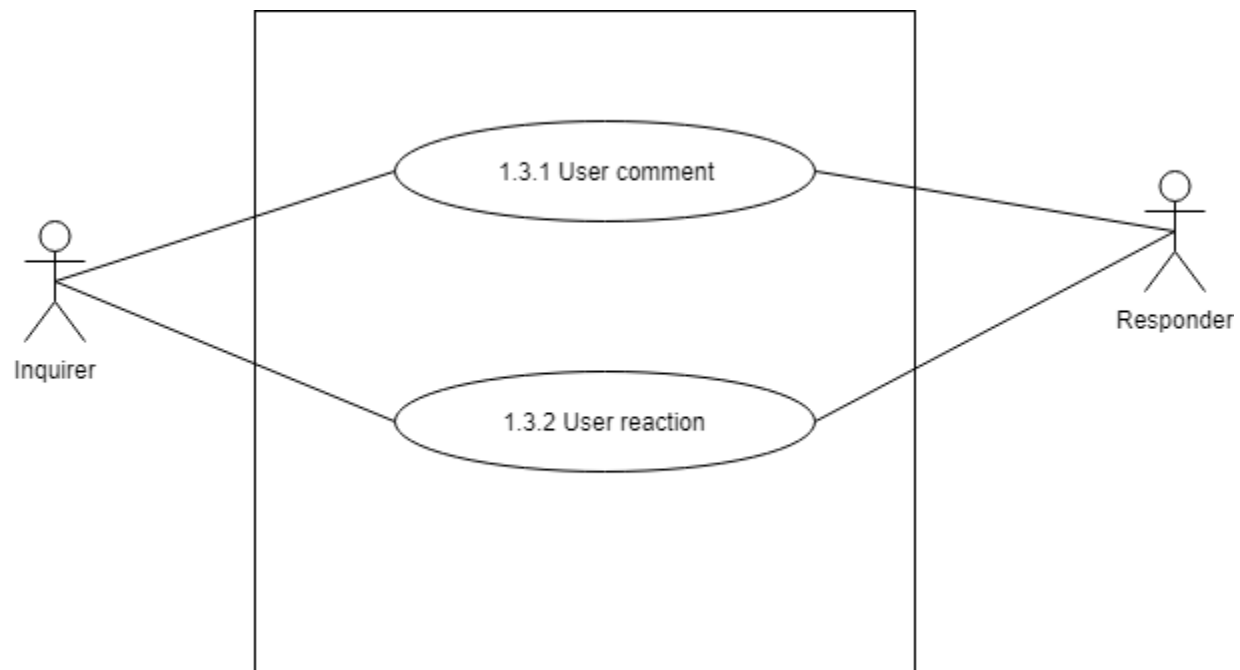

Secondary actor: N/A

#### DESCRIPTION OF LEVEL- 1.2 USE CASE DIAGRAM-

There are 2 subsystems in Answer management subsystem. These are-

- Answer to question
- User reaction to answer

### 4.3.5 LEVEL -1.3 USE CASE DIAGRAM- COMMENT MANAGEMENT

*Figure 5: level 1.3 use case diagram- Comment management*

Name: Comment management of EQAF

Primary actor: Inquirer, Responder

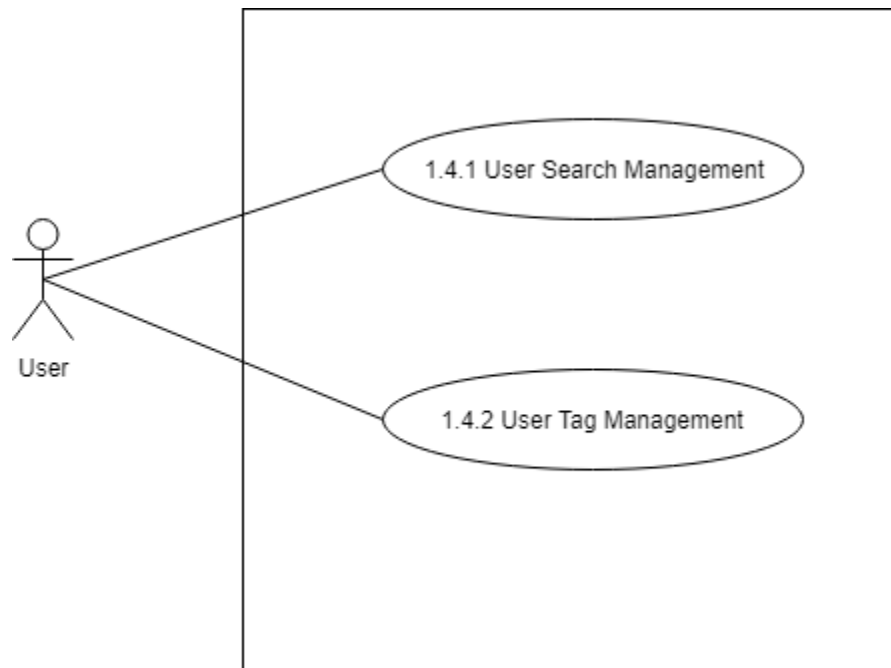

Secondary actor: N/A

### DESCRIPTION OF LEVEL -1.3 USE CASE DIAGRAM

There are 2 subsystems in comment management subsystem. These are-

- User comment
- User reaction

### 4.3.6 LEVEL -1.4 USE CASE DIAGRAM -USER MANAGEMENT

*Figure 6: level 1.4 use case diagram- user management*

Name: User Management of EQAF

Primary actor: User

Secondary actor: N/A

### DESCRIPTION OF LEVEL- 1.4 USE CASE DIAGRAM

There are 2 subsystems in comment management subsystem. These are-

- User search management
- User tag management

## 4.4 ACTIVITY DIAGRAMS

### ACTIVITY DIAGRAM: CREATE QUESTION

Figure 7: Level 1.1 Activity diagram – Create question

## ACTIVITY DIAGRAM: USER REACTION

Figure 8: Level 1.1.1 Activity diagram – User Reaction

## ACTIVITY DIAGRAM: ANSWER TO QUESTION

Figure 9: Activity diagram of Answer to question

## ACTIVITY DIAGRAM: USER REACTION TO ANSWER

Figure 10: Level 1.1.2 Activity diagram – User reaction to answer.

## ACTIVITY DIAGRAM: USER COMMENT

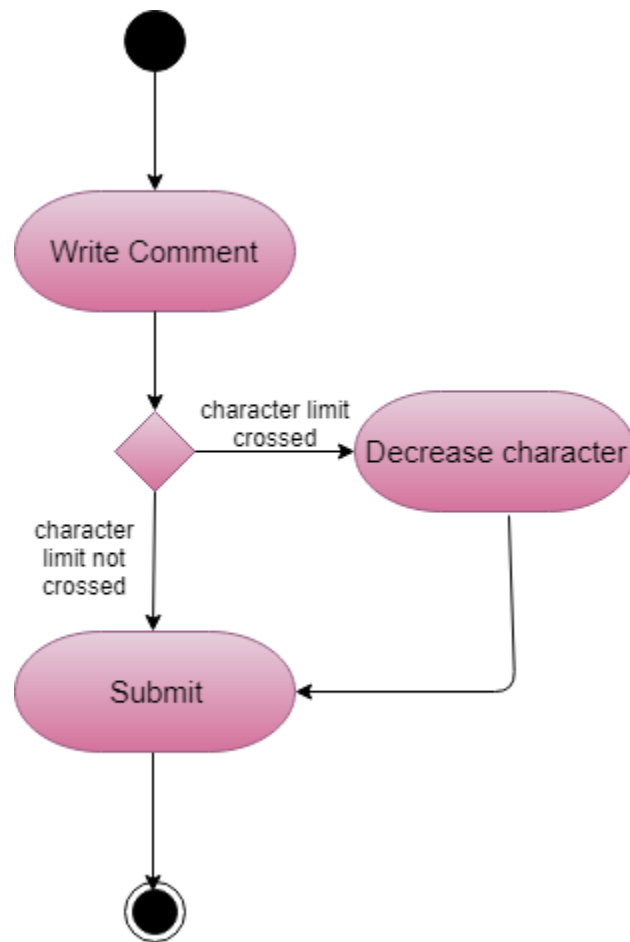

Figure 11: Level 1.1.3 Activity diagram –User comment

## ACTIVITY DIAGRAM: USER REACTION TO COMMENT

Figure 12: Level 1.2 Activity diagram – User Reaction to Comment

## ACTIVITY DIAGRAM: USER SEARCH

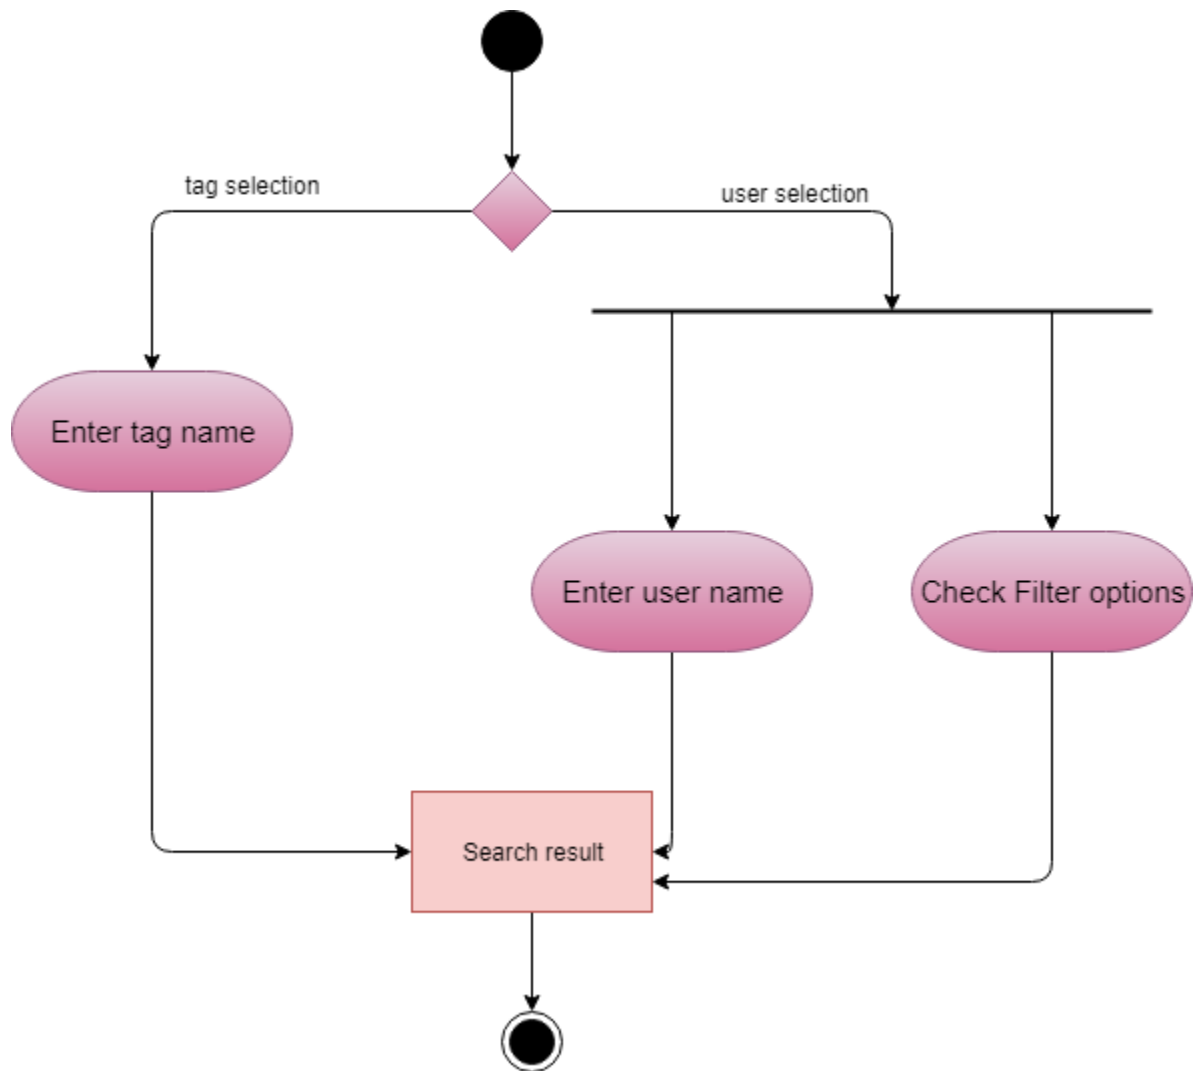

Figure 13: Level 1.2.1 Activity diagram – User search

## **CHAPTER-05: DATA BASED MODELING OF EQAF**

This chapter describes the Scenario-Based Model for the Educational Question Answer Forum.

### **5.1 INTRODUCTION**

Sometimes software requirements include the necessity to create, extend or interact with a database or complex data structures need to be constructed and manipulated. The software team chooses to create data models as a part of overall requirements modeling. The entity-relationship diagram (ERD) defines all data objects that are processed within the system, the relationships between the data objects and the information about how the data objects are entered, stored, transformed and produced within the system.

### **5.2 DATA OBJECTS**

A data object is a representation of composite information that must be understood by the software. Here, composite information means an information that has a number of different properties or attributes. A data object can be an external entity, a thing, an occurrence, a role, an organizational unit, a place or a structure.

#### **5.2.1 FINAL DATA OBJECT**

- 1      User: userId, tags, reputation, location
- 2      Question: \_fileName, description, title, time, reaction, userId, questionId, tags
- 3      Answer: \_fileName, description, time, reaction, userId, questionId, answerId
- 4      Comment: description, time, reaction, userId, source
- 5      Tag: description, tagname, tagId
- 6      Notification: description, time, userId, status, notificationId

## 5.3 SCHEMA DIAGRAM

A schema is a structure behind data organization. In a schema diagram, all database table are designated with unique columns and special features, e.g., primary key, foreign keys.

Table 1: schema table of User data object

User		
Attributes	Type	Size
Id	VARCHAR	24
<u>userId</u>	VARCHAR	40
tags	VARCHAR	80
reputation	NUMBER	40
location	VARCHAR	50

Table 2: schema table of Question data object

Question		
Attributes	Type	Size
<u>Id</u>	VARCHAR	40
userId	VARCHAR	24
tags	VARCHAR	80
description	VARCHAR	50
title	VARCHAR	30

<b>datetime</b>	VARCHAR	15
<b>reaction</b>	NUMBER	80
<b>isAccepted</b>	Boolean	1

Table 3: schema table of Answer data object

Answer		
Attributes	Type	Size
<b><u>answerId</u></b>	VARCHAR	40
<b>questionId</b>	VARCHAR	40
<b>description</b>	VARCHAR	40
<b>datetime</b>	VARCHAR	50
<b>ratings</b>	VARCHAR	30

Table 4: schema table of Comment data object

Comment		
Attributes	Type	Size
<b><u>Id</u></b>	VARCHAR	40
<b>userId</b>	VARCHAR	40

<b>targetId</b>	VARCHAR	40
<b>datetime</b>	VARCHAR	80
<b>target</b>	VARCHAR	1
<b>ratings</b>	VARCHAR	50
<b>text</b>	VARCHAR	30

Table 5: schema table of Tag data object

Tag

<b><u>Id</u></b>	VARCHAR	40
<b>recommendations</b>	Array: VARCHAR	40

## **CHAPTER-06 CLASS BASED MODELING**

This chapter describes the class-based model for Educational Question-Answer Forum for Bangladesh.

### **6.1 INTRODUCTION**

Class-based methods for requirements modeling use common concepts of object-oriented programming to craft an impression of an application that can be understood by nontechnical stakeholders. As the requirements model is refined and expanded, it evolves into a specification that can be used by software engineers in the creation of the software design. Class-based modeling represents:

1. The objects the system will manipulate
2. The operations (methods or services) that will be applied for effective manipulation
3. The relationships between the objects
4. The collaboration that occurs between the classes

### **6.2 IDENTIFYING ANALYSIS CLASS**

Classes are identified by underlining each noun or noun phrase and plotting it into a simple table. If the class (noun) is required to implement a solution, then it becomes a part of the solution space. Otherwise, if the noun is used only to describe a solution, it is regarded as a part of the problem space. Once all the nouns have been isolated, General classification and Selection is done.

#### **6.2.1 CLASS CARDS**

After identifying my final classes, I have generated following class cards

*Table 8: User*

User	
Attributes	Methods
UserId, Reputation, Location, Tags, Answers, Questions, Comments	N/A

Responsibilities	Collaborative class
N/A	Tag, Comment, Answer, Question, Recommendation

Table 9: Question

Question	
Attributes	Methods
Description, Image, Tags, User, Reactions, Comments, Time	N/A
Responsibilities	Collaborative class
N/A	Answer, User, Tag, Comment

Table 10: Answer

Answer	
Attributes	Methods
Description, Image, Tags, User, Reactions, Comments, Time	N/A
Responsibilities	Collaborative class
N/A	Question, User, Tag, Comment

Table 11: Comment

Comment
---------

Attributes	Methods
Reaction, User, Description	N/A
Responsibilities	Collaborative class
N/A	Question, Answer, User

Table 12: UserActivity

UserActivity	
Attributes	Methods
N/A	Answer (), ask (), comment (), vote ()
Responsibilities	Collaborative class
<ul style="list-style-type: none"> <li>➤ Save the answer information</li> <li>➤ Save the question information</li> <li>➤ Save the comment information</li> <li>➤ Send the answer/question formation</li> </ul>	Answer, Question, Comment,

Table 13: Recommendation

Recommendation	
Attributes	Methods
N/A	Recommend(), findSimilarQuestions()
Responsibilities	Collaborative class
<ul style="list-style-type: none"> <li>➤ Recommend question to users</li> <li>➤ Find similar question</li> </ul>	Question, Answer

Table 14: Tag

Tag	
Attributes	Methods
Name, Description, Users	N/A
Responsibilities	Collaborative class
N/A	N/A

Table 15: UserManager

UserManager	
Attributes	Methods
N/A	Get(), Set(), Search(), Filter()
Responsibilities	User
<ul style="list-style-type: none"> <li>➤ Send the user list based on reputation</li> <li>➤ Save new user</li> <li>➤ Search a user</li> <li>➤ Filter users</li> </ul>	N/A

## 6.2.2 CLASS COLLABORATION DIAGRAM

Figure 14: Class collaboration diagram of EQAF

## **CHAPTER-07 IMPLEMENTATION OVERVIEW**

### **7.1 INTRODUCTION**

In this project there exist technical challenges. To get solution to these challenges I need to implement some algorithms.

### **7.2 TOOLS AND TECHNOLOGIES**

In this part describe the tools and technologies in this application.

#### **7.2.1 BACKEND TECHNOLOGIES**

**Framework:** ASP Dotnet Core 2.2

**Programming language:** C#

#### **7.2.2 FRONTEND TECHNOLOGIES**

**Framework:** ReactJS

**Programming language:** TypeScript

#### **7.2.3 DATABASE**

MongoDB Database

#### **7.2.4 THIRD PARTY DEPENDENCY**

**Auth0:** Auth0 service has been used to implement the OAuth2.0(Open Authentication) [1]

#### **7.2.5 OTHERS**

HTML, CSS3, Font Awesome 4

### **7.3 TECHNICAL CHALLENGES**

The technical challenges to implement the application are below:

1. Question recommendation to appropriate users
2. Similar Question suggestion to user while creating question
3. New to C# programming, dotnet framework, ReactJS, Mongo DB, OAuth2.0.

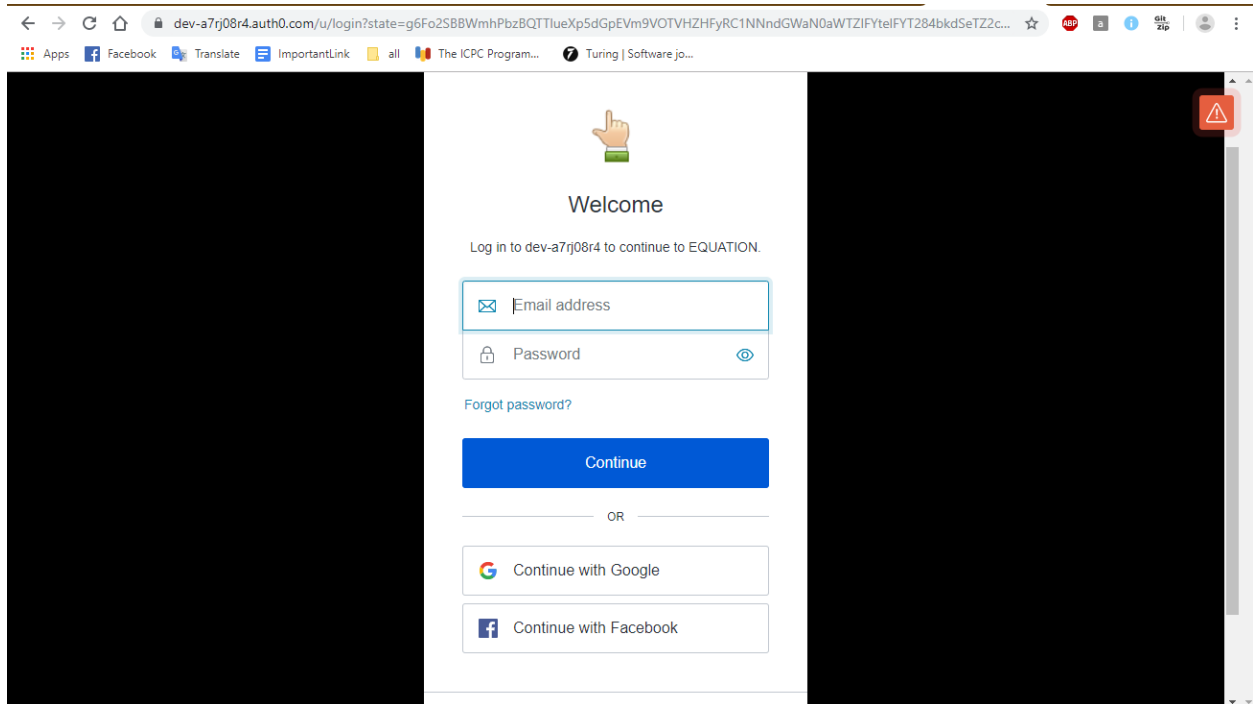

## **7.4 ALGORITHMS**

1. Apriori: To recommend/send asked question to appropriate users [1]
2. Cosine Similarity measurement: To get similar question while user creating question [2]

## CHAPTER-08 USER MANUAL

### AUTHENTICATION

OAuth is used of user authentication.

*Figure 15: User Authentication using*

User can log in with Gmail or Facebook.

Figure 16: Sing in using google

## HOME PAGE

User will see the recommended questions after login in home page.

User can click on a question and go to the discussion page.

If user click in “নিশ্চিত করুন” then question will be posted and discussion page will be displayed.

## **CHAPTER-09: CONCLUSION**

I am pleased to submit draft report on Educational Question Answer Forum. From this, the readers will get a clear and easy view of the overall system. This SRS document can be used effectively to maintain the software development cycle and user manual will give a précised usage of the application. I tried my best to remove all dependencies and present the concept of the application and implementation details. I believe that the reader will find it in order.
